Re: Sanitary Landfill Permit No. 1972-5
Supplemental Permit No. 74-122

Dear Mrs. Olson:

This letter is in reference to our phone conversation of today regarding Mr. Thomas P. Clark's letter dated September 4, 1974, granting us a supplemental permit for the dumping of lime sludge from the water treatment plant of the Village of Park Forest. As outlined in their letter to me, of which I mailed you a copy July 16, 1974, this material is 60% water by volume. The solid components consist of calcium carbonate (84%) and magnesium hydroxide (11%), with 5% miscellaneous material.

Since the sludge consists of this type of material it is almost in the form of a liquid and therefore we cannot comply with Item No. 1 of your permit stating that we have to cover the material with soil. The remaining of your requirements can be easily accomplished and we would dump this sludge in an already filled in area in a shallow layer and as soon as the water drains out of it and it becomes dry, depending on how much rain we have, we would then mix it with clay and use it as cover material in another area of our landfill.

We would appreciate your acknowledging this letter and as you outlined to me in our phone conversation it will be permissible to have Park Forest start hauling the material to our site under these conditions as soon as they desire.
